- github.com/Ptopic

Full stack developer with experience building both the front-end and back-end of web apps as well as mobile applications.

PROJECTS

Dopamine IOS app (React Native)

- Technologies used: React, React Native, Express.js, Node.js, SQL, Formik
- Designed and implemented an IOS application that allows users to sign up and sign in using email and password
- Users data is encrypted and stored in mysql database. When users sign up they get a 4 digit randomly generated OTP code via email that is then used to verify their email
- Users can also reset password using email used during registration. User then gets a email containing a reset link which redirects them to a react app form where they can reset their password
- Implemented custom api for fetching user phone number extension e.g. "+385 for Croatia" which is used when user want to add a phone number to their account
- All forms have input validation using formik

Font collection React app

- Technologies used: React, Express.js, Node.js, SQL, GSAP, HTML, CSS
- Design and implemented an React application for storing fonts for website designs in SQL Database and displaying them in an animated list that is triggered on scroll
- Implemented manage route for managing font in database
- Can add new fonts to database and edit each font

Pikachu figure collection React app

- Technologies used: React, Express.js, Node.js, SQL, GSAP, HTML, CSS
- Design and implemented an React application for storing figures in SQL Database and displaying them in 2 groups based on if figure is collected or not
